

Auto Adjust Package

FULLY AUTOMATIC CASE SIZE CHANGE TECHNOLOGY

EoL

END OF LINE

Improved OEE with Reduced Changeover Times and Higher Precision

The Auto Adjust Package augments traditional manual change over with positioning actuators, automating changeover points to allow for a quick and precise changeover. Case size recipes can be saved in the HMI and easily retrieved and selected when a size change is desired.

The Auto Adjust Package provides significantly improved OEE with quicker changeovers, and improves overall machine consistency by ensuring case size changes are always the same, removing the variations that occur with different operators. ROI also comes in the form of reliable and predictable case size changes as operator error or incorrect adjustments can often lead to downtime or worse, machine damage.

The Auto Adjust Package is available on our premium models of Wexxar Bel case erectors and sealers including the WF30, BEL 290 and the DELTA 1.

One touch case size changeover.

Significant ROI

Precise, quick and tool-less automated size changeover provides reliable and repeatable case size change, improves productivity and reduces downtime. The operator is able to utilize this time to focus on other packaging functions.

Production Predictability

Predictable case size adjustments allows for proper planning of the time required for a case size change. Incorrect case size change can often lead to unplanned downtime or worse, machine damage.

Box 1 is Ready to Run

Precise case size adjustments eliminate the need to test run cases after a size changeover.

Flexibility

The devices are integrated with our Wexxar color-coded size change handles meaning even in the unlikely event that there is an issue with a positioning device, manual size change is still possible.

Minimal Training Required

Box recipes can be conveniently stored and retrieved from the machine's HMI. The process is simple and easy; reducing the amount of training required and reduces the amount of manual labor involved in a size change.

Easier Service and Machine Maintenance

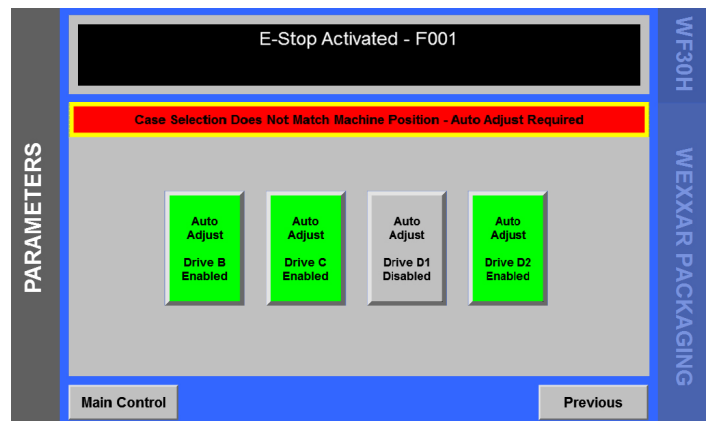

All actuator devices are self-contained with quick-disconnect, meaning replacement is quick and easy. The positioning actuators are fully integrated with our machines meaning maintenance and troubleshooting can all be done from the HMI.

Up to 30 case recipes can be easily stored and retrieved from the machine's touch screen control panel.

Color-coded size change handles allows flexibility to do manual size change when needed.

Fully integrated actuators enhances on-board machine maintenance and troubleshooting.
